

About Txture

Txture is a revolutionary IT management platform for companies with complex and evolved IT landscapes. In times of highly distributed systems, which are becoming more and more complex due to trends such as Industry 4.0, IoT, Cloud and IT outsourcing, a company's success crucially depends on the fast and regulatory compliant transformation of IT. Txture automatically analyzes all IT dependencies and supports the entire life cycle of IT transformations. It thus enables unparalleled agility in important projects such as cloud and data center migrations, the implementation of regulatory requirements or modernization initiatives.

The software vendor Txture was founded in 2017 as a spin-off from the Institute of Computer Science of the University of Innsbruck, Austria. The two managing directors are Dr. Matthias Farwick (CEO) and Dr. Thomas Trojer (CTO). For large projects, Txture regularly cooperates with well-known IT consulting firms.
